1.2 concept of equilibrium. the separation processes we are studying in chapters 1 to 14 are based on the equilibrium stage concept, which states that streams leaving a stage are in equilibrium. A pitot-static system is a system of pressure-sensitive instruments that is most often used in aviation to determine an aircraft's airspeed, mach number, altitude, and altitude trend. a pitot-static system generally consists of a pitot tube, a static port, and the pitot-static instruments. errors in pitot-static system readings can be extremely dangerous as the information obtained from the
